2015294	PROPAK	ProPak self contained breathing apparatus for single cylinder use, comprising lightweight anti-static composite backplate with Kevlar cylinder band and fully adjustable padded body harness: Two stage pneumatic system comprising Tempest automatic positive pressure demand valve with bypass, shoulder mounted pressure indicator and 55 bar warning whistle: First stage extended pressure reducer with ancillary high pressure port and single high pressure cylinder connector. Harness fabricated from 100% Kevlar material and featuring lumbar back pad. Apparatus accepts full range of Scott breathing apparatus cylinders from 4.7 to 11.0 litres capacity, 200 or 300 bar. <i>Apparatus is CE Marked to EN137:2006 Type 2.</i>

2026501	2026501	Respirator airline apparatus comprising Tempest automatic positive pressure demand valve, supply hose and airline connection manifold mounted on fully adjustable webbing bandolier harness. Constructed from a hard wearing and robust webbing making it more resilient to regular and heavy use. CEN type airline connection hose. Please select required facemask from list below.	357,00	3C
2026499	2026499	Respirator airline apparatus comprising Tempest automatic positive pressure demand valve, supply hose and airline connection manifold mounted on fully adjustable wipeclean bandolier harness. The harness surface is smooth which reduces the trapping of external substances and makes the set easier to clean after use. CEN type airline connection hose. Please select required facemask from list below.	357,00	3C

1072167 SABRETEST 3

Sabretest breathing apparatus test equipment, c/w test head, hoses, software and leads.220/240v AC 50Hz.

The Sabretest 3 provides a complete dynamic testing of SCBA performance. Standard tests include mask leak test, exhalation valve test, static pressure in mask, breathing resistance, by-pass flow rate, gauge accuracy and low pressure alarm activation. The Sabretest 3 will also test the Scott range of negative pressure facemasks and PAPR full facemask range.

Test results can be stored and test reports printed. The database feature of the software allows complete records of individual sets to be stored at each service enabling a complete service history to be built up.

A Personal Computer (not included), which is simply connected through a USB port, is required to drive the SabreTest. Apparatus supplied in aluminium flight case for returning the Sabretest for recalibration.

NB: The Sabretest is a piece of computerised test equipment which is programmed to receive periodic recalibration. In areas where 3M | Scott Technical Support is not available, it will be necessary to return the equipment for recalibration.

Alternatively, a visit will be required by a 3M | Scott Technician. Please contact the 3M | Scott Technical Support Department for more details.
